

BRIEF CURRICULUM VITAE

Name: Ana Isabel Fernández Ávila

Date of birth: 21-06-1976

Contact: avila@inia.es; +34 913478717

Qualifications: Degree in Biological Sciences (Universidad Complutense de Madrid – Spain, 1999); PhD in Biology - Genetic Program (Universidad Complutense de Madrid - España, 2003)

Current position: Senior scientist (INIA, Dpto Mejora Genética Animal, since 2007)

Main research areas:

Molecular genetics technologies applied to animal breeding and conservation: molecular marker development, genome scans, candidate gene analyses and transcriptome and genome analyses.

Main research projects

- National Project: AGL2014-56369-C2-1-R: “Genetic and functional validation of QTLs, genes and gene networks and study of microbiome effect on growth, fatness and meat quality in swine”
- National Project: RZ2010-00009-00-00: “Developing a reduced SNP panel for breed authentication of Iberian pigs registered in the Herd book of the Iberian pig breed”
- National Project: AGL2011-29821-C02-02: “Application of Genomics and Massive Parallel Sequencing methods to the study of genetic variants that regulate growth, conformation and meat quality in pigs”
- EU project: EU613611: “Improving European aquaculture by advancing selective breeding to the next level for the six main finfish species”
- National project S2009/AGR-1704: “New production systems to maximize the meat quality and welfare”
- National project RTA2011-00113-00-00: “Application of new genomic tools for Iberian pig selection”

Main peer-reviewed publications

- Silió L. et al (2015) Assessing effective population size, coancestry and inbreeding effects on litter size using the pedigree and SNP data in closed lines of the Iberian pig breed. *J Anim Breed Genet.* doi: 10.1111/jbg.12168.
- Pérez-Montarelo D. et al (2015) Haplotypic diversity of porcine LEP and LEPR genes involved in growth and fatness regulation. *J Appl Genet.* doi 10.1007/s13353-015-0284-7
- Fernández A.I. et al (2014) Copy number variants in a highly inbred Iberian porcine strain. *Animal Genetics* 45(3):357-66.
- Silió L. et al (2013). Measuring inbreeding and inbreeding depression on pig growth from pedigree or SNP-derived metrics. *J Anim Breed Genet* 130: 349-360.

- Pérez-Montarello D. *et al* (2013). Identification of genes regulating growth and fatness traits in pig through hypothalamic transcriptome analysis. *Physiological Genomics* 00151.2013.
- Muñoz M. *et al* (2013). Genome-wide analysis of porcine backfat and intramuscular fat fatty acid composition using high-density genotyping and expression data. *BMC Genomics* 14(1):845.
- Fernández AI. *et al* (2012). Genome-wide linkage analysis of QTL for growth and body composition employing the PorcineSNP60 BeadChip. *BMC Genetics* 13:41.
- Pérez-Montarello D. *et al* (2012). Porcine Tissue-Specific Regulatory Networks Derived from Meta-Analysis of the Transcriptome. *PlosOne* 7:e46159.
- Muñoz M. *et al* (2011). Recombination rates across porcine autosomes inferred from high-density linkage maps. *Animal Genetics* 43:620-623.
- Fernández-Rodríguez A. *et al* (2011). Differential gene expression in ovaries of pregnant pigs with High and Low prolificacy levels and identification of candidate genes for litter size. *Biology of Reproduction* 84:299-307.
